Capstone Project PROPOSAL

Submitted : 19 July 2026

PROJECT TITLE

Student mark system

STUDENT DETAILS

Name(s) : Kiseki Gilili, Hlonela Sompondo, Banoyolo Ngeva, Siphosethu Ngxwana, Luniko Funde
Cohort: SDL4
Facilitator : Tafadzwa Makumbe

INTRODUCTION

Many schools still record and manage student marks using paper records or spreadsheets. This method can be time consuming, prone to errors, and difficult to organize. This project aims to develop a Student Mark System that makes recording, updating, and managing student marks faster, more accurate, and more efficient

PROBLEM STATEMENT

Teachers often spend a lot of time recording and calculating student marks manually. Paper records and spreadsheets can be lost, damaged, or contain calculation errors. There is a need for a digital system that securely stores student information, calculates final marks automatically, and generates reports to improve the management of academic records.

AIM

To design and develop a Student Mark System that enables teachers to record, update, manage, and report student marks efficiently

OBJECTIVES

1.Create a secure login page for users.
2.Allow teachers to add, update, and delete student marks
3.Store student information and marks in a database
4.Automatically calculate final marks
5.Generate reports showing student academic performance
6.Enable users to search for student records quickly.

SCOPE OF THE PROJECT

This project will focus on creating a Student Mark System for recording and managing student marks. It will include student records, mark calculations, report generation, and search functionality. Features such as parent access, SMS/email notifications, and online student portals will not be included and can be added in future versions

METHODOLOGY

1. Research and planning.
2. Design the system interface and database.
3. Develop the Student Mark System.
4. Test and fix any errors.
5. Present the completed project.

TOOLS AND TECHNOLOGIES

Django (Python)
HTML
MySQL
CSS
Visual Studio Code

PROJECT TIMELINE

WEEK 1	Research and planning
WEEK 2	System and database design
WEEK 3	Develop student and marks management features
WEEK 4	Testing and fixing errors
WEEK 5	Final presentation

EXPECTED OUTCOME

BY THE END OF THE PROJECT, THERE WILL BE A FULLY FUNCTIONAL STUDENT MARK SYSTEM THAT ALLOWS TEACHERS TO RECORD, UPDATE, AND MANAGE STUDENT MARKS EFFICIENTLY. THE SYSTEM WILL AUTOMATICALLY CALCULATE FINAL MARKS, GENERATE REPORTS, AND MAKE SEARCHING FOR STUDENT RECORDS QUICK AND EASY. THIS WILL IMPROVE ACCURACY, SAVE TIME, AND SIMPLIFY THE MANAGEMENT OF STUDENT ACADEMIC PERFORMANCE

CONCLUSION

THIS PROJECT WILL DEMONSTRATE HOW A DIGITAL STUDENT MARK SYSTEM CAN IMPROVE THE WAY TEACHERS MANAGE STUDENT RESULTS. IT WILL REPLACE MANUAL METHODS WITH A FASTER, MORE RELIABLE SOLUTION WHILE GIVING THE STUDENT EXPERIENCE IN PLANNING, DESIGNING, DEVELOPING, TESTING, AND PRESENTING A COMPLETE SOFTWARE APPLICATION.
